

PIVOT & SCREWS KIT STAR CLASSIC

SERIOUS HEAD PROTECTION

To remove the old shield, unscrew the pivot using the supplied original Bell hexagonal wrench. Place new rubber washers and reinstall the shield on the washer. Holding the shield and the washer centred over the thread hole, screw in the pivot until quite snug. Install both pivots, and then close the shield. Adjustment of the Excentric buttons may be required. Use the supplied original Bell hexagonal wrench. Rotate the left side button so than the shield latches readily yet securely wher pulled down bu the top centre edge. Note that the right side Excentric button is rounded to allow easier opening. If you prefer a firmer latching, you can replace the rounded butter by the same button as used on the left side.
